## DETAILED ACTION

### *Response to Amendment*

On 03/03/2009, applicant amended claims 7, 8-12, 20-25, 32-39, 41-66, 68-87, and 110-112.

Claims 7-12, 14-39, 41-66, 68-87, and 110-112 are pending and are allowed.

### *Examiner's Reasons for Allowance*

The following is an examiner's statement of reasons for allowance:

Applicant amendments and comments of 3 March 2009 are commensurate with the disclosures and are persuasive.

The Examiner relies on applicant's disclosures to interpret the claims for purposes of 35 USC 101:

As to method claim 7 and its dependent claims, the term ...computer system... is interpreted as a machine that includes hardware such as identified in Figs. 10 and 11.

As to claim 34 and its dependents, the term ...volatile or non-volatile machine-readable storage medium ... the Examiner relies on paragraph 0136

[0136] The term "machine-readable medium" as used herein refers to any medium that participates in providing data that causes a machine to operation in a specific fashion. In an embodiment implemented using computer system 1100, various machine-readable media are involved, for example, in providing instructions to processor 1104 for execution. Such a medium may take many forms, including but not limited to, non-volatile media, volatile media, and transmission media. Non-volatile media includes, for example, optical or magnetic disks, such as storage device 1110. Volatile media includes dynamic memory, such as main memory 1106. Transmission media includes coaxial cables, copper wire and fiber optics, including the wires that comprise bus 1102. Transmission media can also take the form of acoustic or light waves, such as those generated during radio wave and infrared data communications.

Applicant also distinguishes his claims from prior art as follows:

Art Unit: 3625

By identifying one or more "similar users" in this manner, in particular, by identifying one or more similar users based on one or more reference items as featured in Claim 7, the method of Claim 7 increases the likelihood that a recommendation made based on what those one or more similar users liked and disliked more accurately reflects what the particular user will like.

Updated searches were performed for the amended claim language. The closest US prior art is Linden (6,266,649), which Applicant distinguishes from his invention:

...approach described in Linden and those conventional approaches do not identify "similar users" based on a set of reference items which are identified by identifying items that have ratings similar to the ratings given to the recommended item. Thus, Applicants respectfully submit that Linden's "collaborative filtering" approach for recommending items does not teach or in any way suggest at least "identifying, based on the one or more reference items that have ratings similar to ratings of the particular item that the particular user has not yet rated, one or more other users of the plurality of users that have given ratings to the one or more reference items that are substantially similar to ratings given by the particular user to the one or more reference items"

...once the similar item lists are obtained based on the items of known interest, the approach of Linden does not then go on to identify, based the similar item lists, users that rated similar items similarly to how the particular user rated those similar items and then does not further recommend items based on those identified users.

However, the prior art neither anticipates nor renders obvious the combination,

inter alia,

...identifying, from the plurality of items, one or more reference items that have ratings similar to ratings of the particular item that the particular user has not yet rated;

... identifying, based on the one or more reference items that have ratings similar to ratings of the particular item that the particular user has not yet rated, one or more other users of the plurality of users that have given ratings to the one or more reference items that are substantially similar to ratings given by the particular user to the one or more reference items; and

...generating an estimation of how the particular user would rate the particular item based upon ratings for the particular item given to the particular item by the one or more other users.

The closest non-patent literature is LikeMinds, cited by applicant on 05/25/2007, in an IDS. Again, LikeMinds neither anticipates nor renders obvious the combination,

inter alia,

...identifying, from the plurality of items, one or more reference items that have ratings similar to ratings of the particular item that the particular user has not yet rated;

... identifying, based on the one or more reference items that have ratings similar to ratings of the particular item that the particular user has not yet rated, one or more

Art Unit: 3625

other users of the plurality of users that have given ratings to the one or more reference items that are substantially similar to ratings given by the particular user to the one or more reference items; and

...generating an estimation of how the particular user would rate the particular item based upon ratings for the particular item given to the particular item by the one or more other users.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
